WISKERS · INTERACTIVE EXPERIENCE ENGINE

# One engine. *Interactive* experiences at scale.

We turn selected material into experiences people can explore — then test where that format creates value.

CONSUMER STORY APP × CLIENT CAMPAIGNS

Scale is the ambition. Repeatable quality, time and cost are what we'll prove.

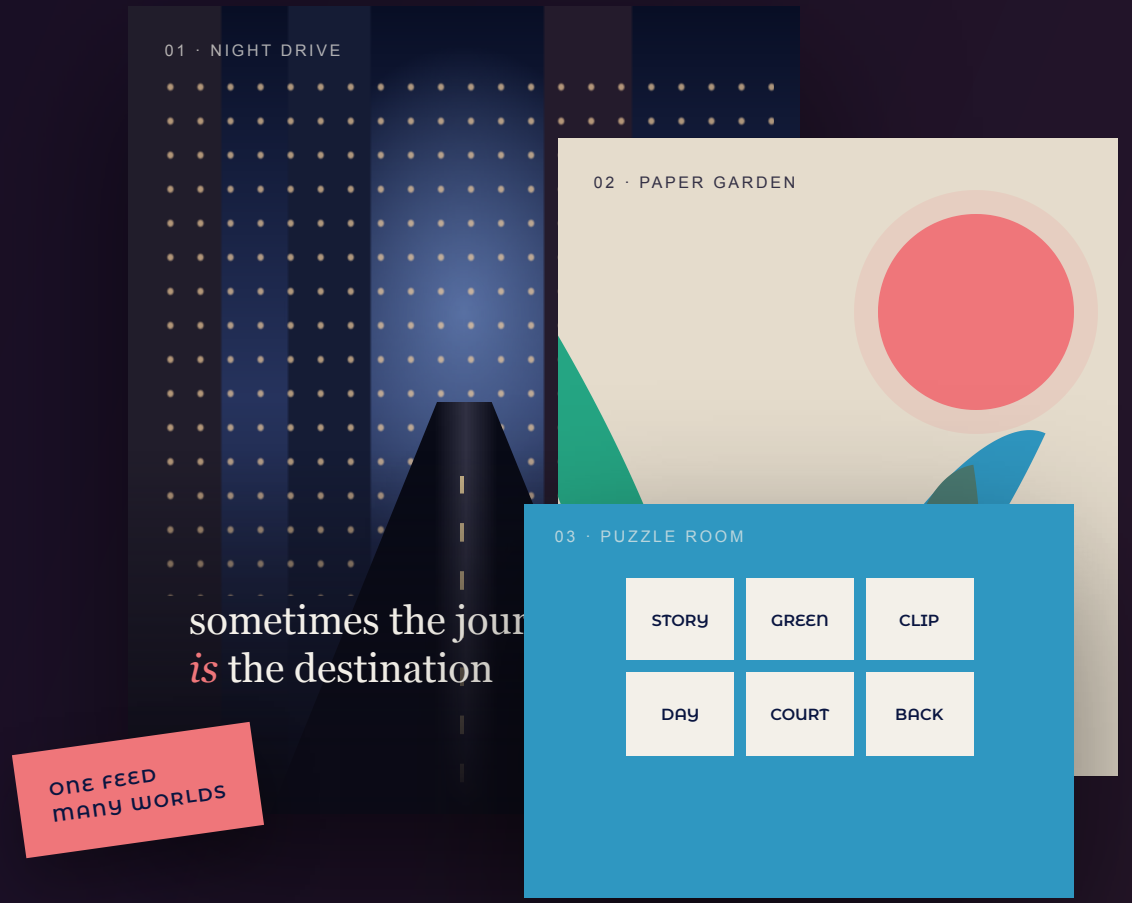

THE EXPERIENCE

# A more immersive way to *discover*.

Scroll into stories that open new ways to read, see and learn. A continually refreshed library gives curiosity somewhere new to go.

The return habit is a hypothesis. We'll measure story completion, voluntary return, saves, shares and what people say they learned.

Explore the interaction study ↗

WORKING INTERACTION STUDY

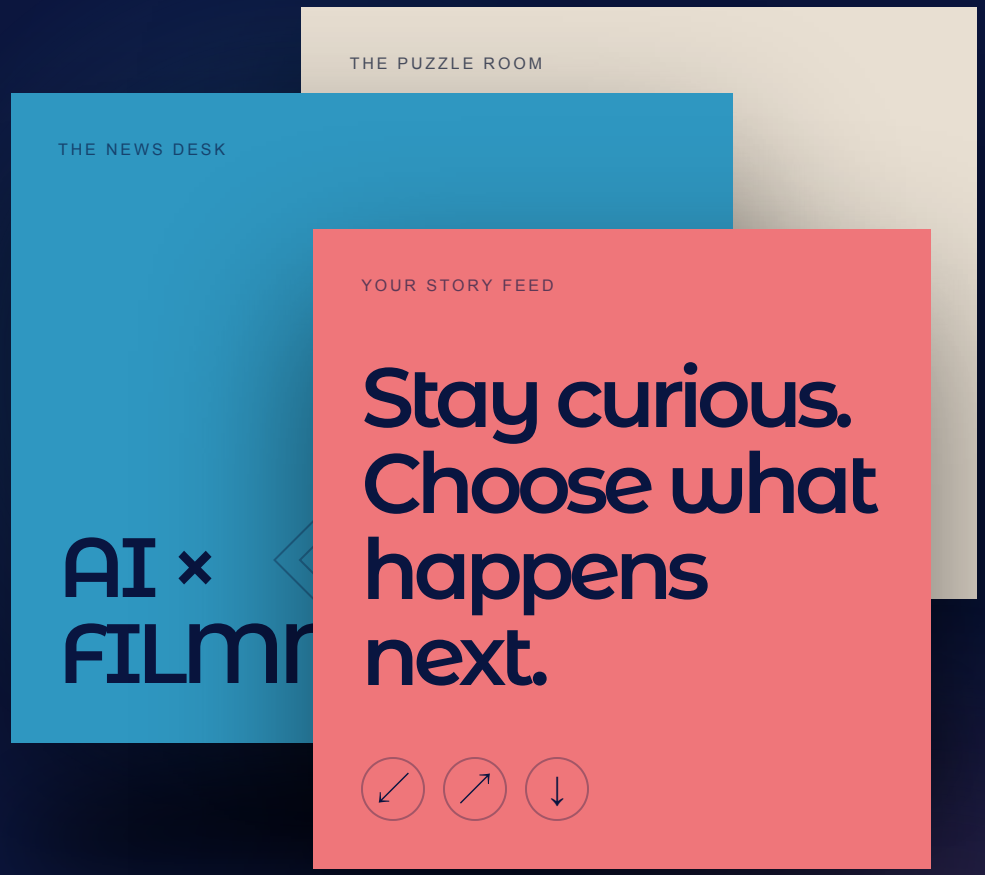

# Stories aren't just read. *They unfold.*

A working prototype explores scroll-driven scenes, polls, puzzles and simple ways to save, share or ask for context.

This demonstrates interaction formats. It is not evidence of retention, a finished consumer product or an automated publishing pipeline.

**Open the story study** ↗

SAVE · ASK · SHARE

# A prepared library.
# *Many ways in.*

Selected, permitted material becomes reviewed stories — ready for a feed or an approved campaign.

Some steps are manual today. Repeatability is to be measured.

# The moat is the system we can *prove*.

A language model alone is not the advantage. It's the repeatable path from selected input to an approved, useful experience.

Defensibility is a thesis until representative benchmarks show the engine getting better, faster or more economical.

WHAT WE NEED TO MEASURE

NO RESULTS CLAIMED YET

01

## Experience quality

Across varied inputs

02

## Time to approval

From brief to ready

03

## Total cost

Build, model, review

04

## Human correction

Edits and review effort

05

## Pipeline reliability

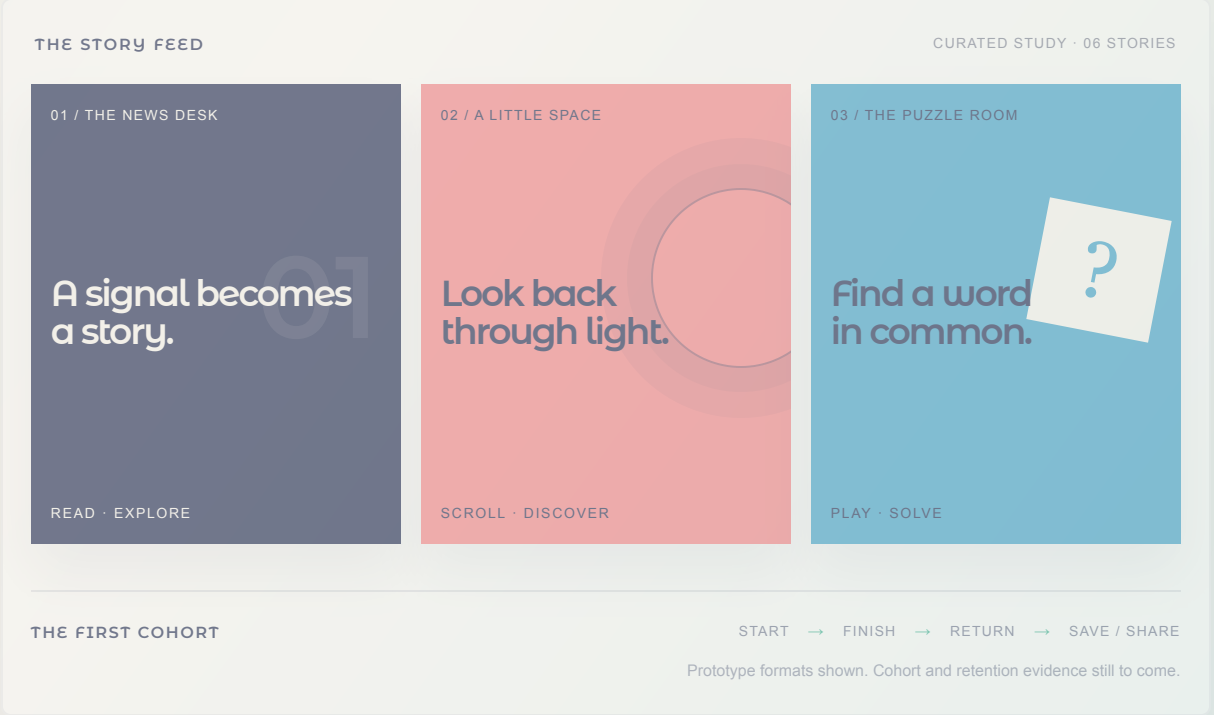

Draft to live library

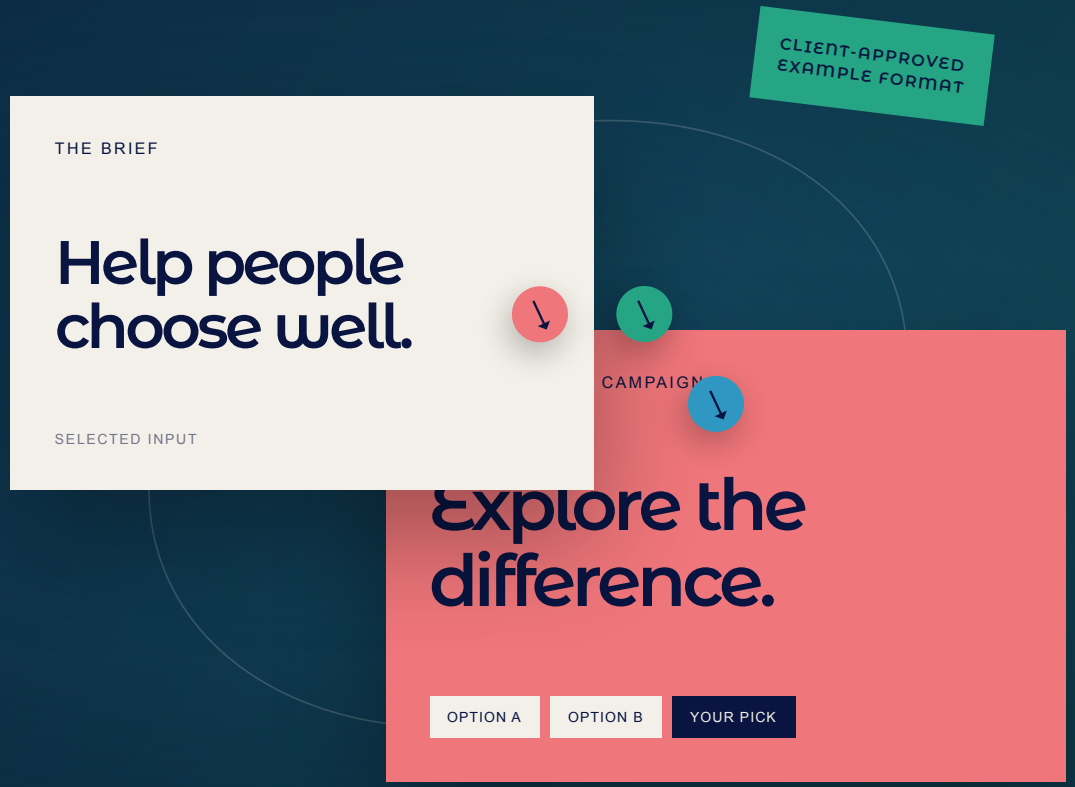

APPLICATION 01 · CONSUMER

# Earn the next visit *one story at a time.*

Start with tech, AI, startups and Cambridge. Learn which stories people choose to finish, return to and pass along.

The product goal is meaningful return and satisfaction — not session length alone.

APPLICATION 02 · CLIENT CAMPAIGNS

# One brief. A campaign people can *explore.*

A bounded, client-approved experience can test the engine in a commercial setting — while creating a useful next step for its audience.

WHAT A PILOT MUST PROVE

- Buyer interest
- Delivery time & cost
- Acceptance & repeat intent

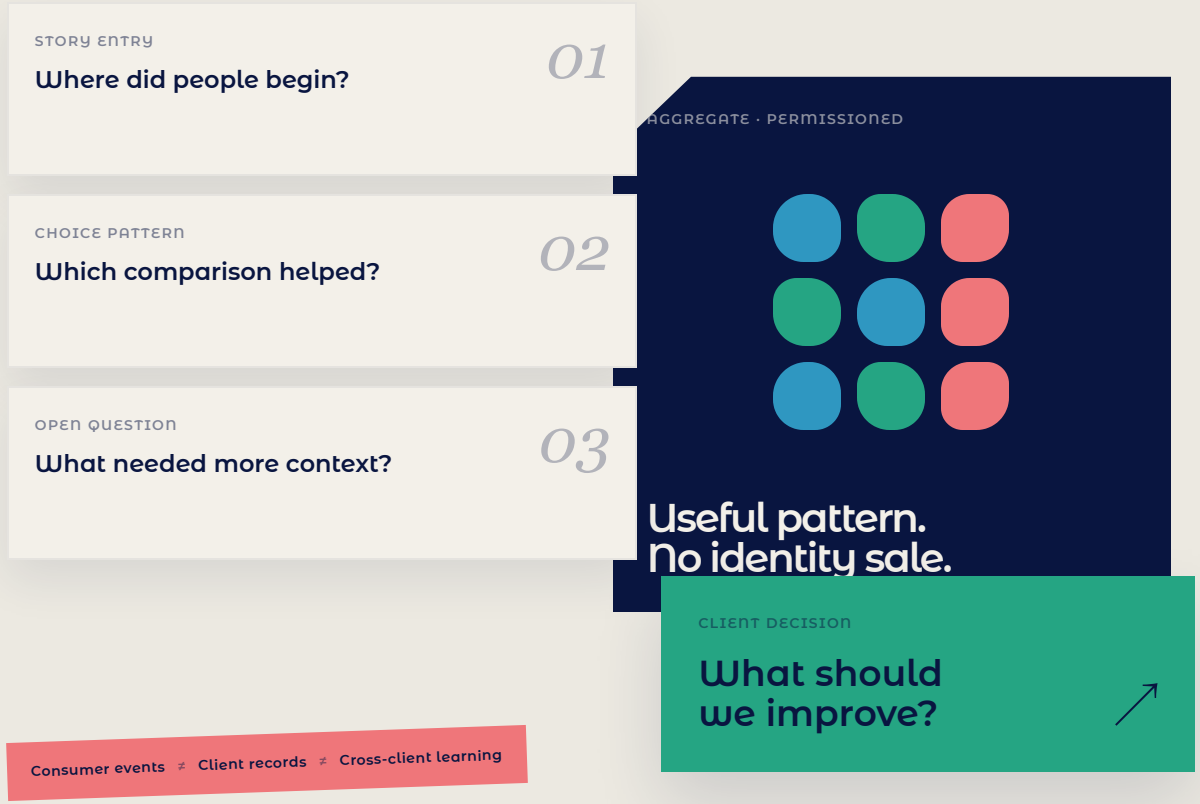

No paid pilot or repeat-purchase result is claimed. Client material stays separate from the public library unless permission says otherwise.

FUTURE LAYER 01 · PERMISSIONED INSIGHT

# Insight matters when it changes a *decision.*

A client may want to know which parts of an experience helped an audience understand — and what deserves a clearer answer.

Scrolls and clicks are observations, not proof of buying intent. Start with a real buyer question, an allowed signal and a decision someone takes.

FUTURE LAYER 02 · CLEARLY LABELLED SPONSORSHIP

# Trust first. *Sponsorship later.*

A sponsor could fund an interactive story that fits a subject someone chose to explore — if the audience and advertiser both value it.

A consumer audience is not ad demand. There is no ad network, inventory or ad revenue claim in this plan.

01

**Earn return use**

Show voluntary value

02

**Test sponsor interest**

Find a real buyer

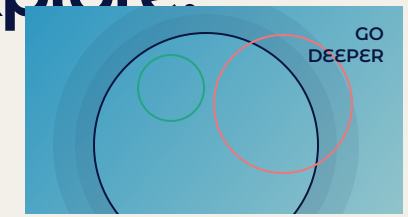

03

**Label it before entry**

Keep it recognisable

SPONSORED STORY · CLEARLY LABELLED

**A subject you chose to explore**

Illustrative format · no advertiser or campaign represented

ONLY BUILD THE NEXT LAYER WHEN THE EVIDENCE SAYS GO

GO-TO-MARKET · TWO TESTS, ONE ENGINE

# Let evidence choose the *lead route.*

Keep consumer and client economics distinct. Compare learning, cost, founder time and proof — then focus.

ONE ENGINE

**Interactive experience**

ROUTE A · CONSUMER

## Story app

Can a focused cohort find, finish and return to stories?

- Activation
- Meaningful return
- Distribution effort

ROUTE B · CLIENT

## Campaigns

Will a buyer approve, pay for and repeat a useful experience?

- Pilot conversion
- Delivery economics
- Renewal interest

MONTH 4 DECISION

**Put the next pound where proof is strongest.**

Neither route is assumed to win. Data products and advertising remain conditional follow-ons.

THE ASK · A DATED PLAN TO PROVE

# £125k to prove *what works.*

An illustrative planning case for a 12-month evidence path — released in stages, with the next commitment tied to what we learn.

Working ask and currency to confirm. Illustrative allocation only; not an agreed budget or verified runway forecast.

01 Weeks 1–8 · up to £22k

02 Month 4 · choose a lead route

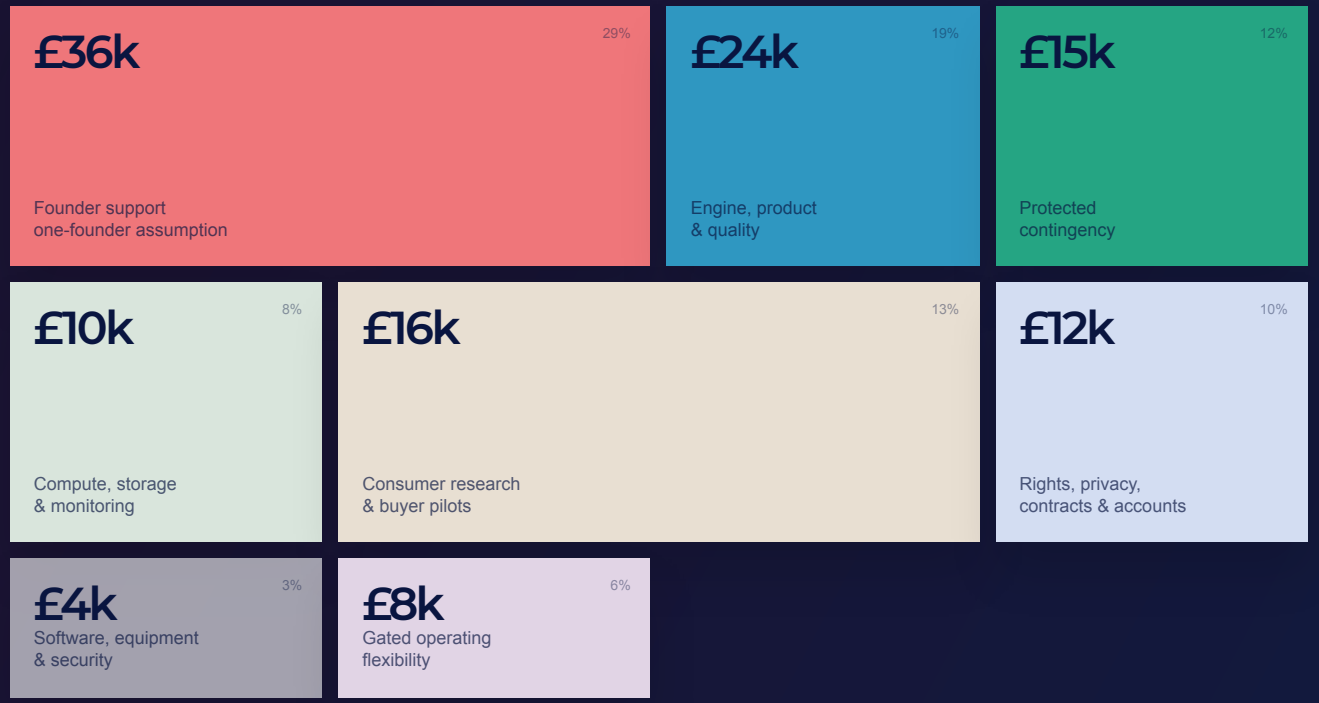

03 Months 5–8 · fund its next proof

04 Months 9–12 · prepare for scale

ILLUSTRATIVE PLANNING ENVELOPE

## £125,000

NO HIRES · ONE-FOUNDER SUPPORT ASSUMPTION

Both founders' actual support, cash position and company costs are unconfirmed. This does not establish 12 months of runway.

WISKERS · TEAM & NEXT MILESTONE

# Build the engine. Prove the first *route.*

JOSH AUGUSTINE

**Campaigns · content syndication · product**

MBA, Cambridge Judge Business School · 2026

IMRAN AZIZUDDIN

**Software · UX evaluation · content**

Robotics engineering · product builder

*We're building the engine for interactive experiences — then proving where it creates the most value.*

**WORKING ASK · £125K*** First milestone: a reviewed, measurable path from input to live experience.

*Planning amount, currency, allocation and runway require founder confirmation.
